

LOAD MANAGEMENT INCENTIVE PROGRAM

The Board of Public Works has been running our Load Management Program since 1981. These load controllers simply shut down your air conditioner or heat pump compressor for seven and one-half (7 ½) minutes out of each thirty (30) minute period during the time the air conditioner or heat pump unit is active and we are in a control mode. The load controller only shuts down your air conditioner or heat pump compressor, your fan will continue to run and circulate air in your home. The load controller is only active during a peak usage time, which is typically on weekday evenings, between 4:00 p.m. and 7:00 p.m.

The Board of Public Works offers a one-cent (\$0.01) per kilowatt hour reduction of your highest summer bill to customers who have a load controller installed. The credit will be applied in late summer on your utility bill.

The Board of Public Works also has a similar program for electric water heaters, which would add an average of eighteen dollars (\$18.00) to your rebate. The rebate depends upon the size of your water heater. When needed, the Board of Public Works will control water heaters for a time period not to exceed a continuous time block of four (4) hours. Water heaters may be controlled all year during a peak usage time.

REQUEST FOR PARTICIPATION IN THE BOARD OF PUBLIC WORKS LOAD MANAGEMENT PROGRAM

Name: _____

Address: _____

Phone #: _____

I hereby request to participate in the Board of Public Works Load Management Program. I understand that the program is voluntary and I hereby acknowledge that this request is made voluntarily.

I further understand that a load management controller unit will be attached to my air conditioning unit or heat pump and/or my electric water heater and that said unit will intermittently cause an interruption in the electric service to said unit. I understand that during the interruption in the electric service, the air conditioner or heat pump will not operate and the compressor will shut off and that the water heater will not heat water.

If I request removal of the load management controller unit, the Board of Public Works shall remove or disable the unit within forty-eight (48) hours of said request.

_____ Please put a load controller on my air conditioner or heat pump.

_____ Please put a load controller on my water heater.

_____ I have a window air conditioner, a load controller will not be installed.

_____ I have a gas water heater, a load controller will not be installed.

_____ I do not wish to participate in the Load Management Program for air conditioners or heat pumps.

_____ I do not wish to participate in the Load Management Program for water heaters.
